PROFILE SUMMARY

As a final-year Computer Science student Specialization in Data Science skilled in Python, SQL, Excel, and Power BI, experienced in data cleaning, EDA, ETL, KPI reporting, and dashboard automation. Strong foundation in statistical analysis, Machine Learning fundamentals, and feature engineering. Adept at transforming large datasets into actionable insights to improve accuracy and decision-making.

EXPERIENCE

INFOTACT Solutions, Data Associate L1

06/2025 – 08/2025 | Remote

- Built task-classification and priority-prediction models (Word2Vec, BERT) and improved their accuracy by 12% through cross-validation, hyperparameter tuning, and error analysis.
- Automated ETL workflows, reporting automation, and KPI dashboards reducing analysis time by 60%.
- Designed a TF-IDF + cosine similarity recommendation engine improving relevance by 25%.

Ardent Computech Pvt. Ltd., Data Science & ML Intern

05/2025 – 07/2025 | Remote

- Developed Logistic Regression and Random Forest models (87% accuracy) with strong AUC and precision-recall metrics; applied statistical significance testing and built preprocessing pipelines that reduced processing time by 70%.
- Analyzed 50K+ medical records using EDA, segmentation, and data modeling to identify top 10 risk indicators, and designed Matplotlib/Seaborn dashboards to automate KPI reporting and support business decisions.

SKILLS

Languages: Python, SQL, HTML, CSS

Data Analysis & Visualization: Data Cleaning, EDA, Feature Engineering, Statistical Analysis, A/B Testing, Segmentation, KPI Tracking, Advance Excel, Power BI

Libraries & Framework: Pandas, NumPy, Matplotlib, Seaborn, Flask, FastAPI

Databases: MySQL (Queries, Joins, Normalization)

Tools: Git, GitHub, Flask, Jupyter Notebook, VS Code, Google Sheets, Postman

PROJECTS

AI-Powered Task Management System

- Implemented an end-to-end AI system for 50K+ tasks using SVM, Random Forest, and XGBoost for automated classification and priority prediction.
- Engineered preprocessing pipelines (Pandas, NumPy) that cut manual cleaning time by 60%.
- Developed a Streamlit dashboard adopted by 20+ team members for task tracking and model metrics.
- Reduced misclassification by 20% via data modeling and increased system adoption by 15% through focused error analysis and feature refinements.

Personalized Recommendation System

- Created a book recommendation engine using content-based filtering across 10K+ books and 5K+ user profiles.
- Optimized vector-based matching techniques, improving recommendation precision by 15%.
- Architected a modular system improving retrieval speed by 40%; scalable to 20K+ items.
- Enhanced performance by 12% through vectorization improvements and parameter tuning.

Cricket Score Tracker

- Automated live match data extraction using BeautifulSoup with 99% real-time update accuracy.
- Built a Tkinter interface reducing navigation effort by 75%.
- Cut match lookup time by 90%, saving ~3 minutes per match.

EDUCATION

Bachelor of Computer Applications (BCA), Arka Jain University

08/2023 – Present | Jamshedpur, India

CGPA: 9.6

CERTIFICATES & ACHIEVEMENTS
